

How to use google AI gemini API

Copy this code into your javascript file

=====

```
function getHashtags(text) {
  const API_KEY = '<YOUR_API_KEY>';
  const url =
    'https://generativelanguage.googleapis.com/v1beta/models/gemini-pro:generateContent?key=' +
    API_KEY;

  const prompt = `Here is an instagram post text: '${text}'. Generate 5 hashtags based on the
text. do not include the # character in the strings. return the hashtags in comma seperated
values`;

  return fetch(url, {
    method: 'POST',
    headers: {
      'Content-Type': 'application/json',
    },
    body: JSON.stringify({
      contents: [
        {
          parts: [
            {
              text: prompt,
            },
          ],
        },
      ],
    })),
  ).then((response) => response.json())
  .then((data) => {
    const commaSeperatedHastags = data.candidates[0].content.parts[0].text;

    const hashtagArray = commaSeperatedHastags
      .split(',')
      .map((tag) => tag.trim());

    return hashtagArray;
  });
}
```

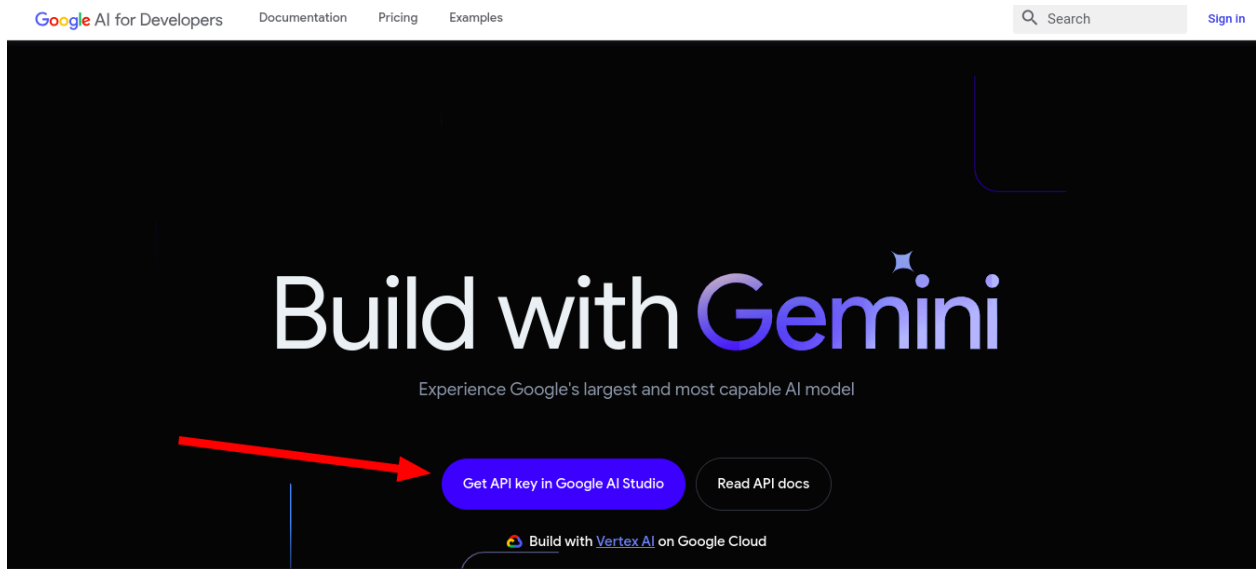

Usage

=====

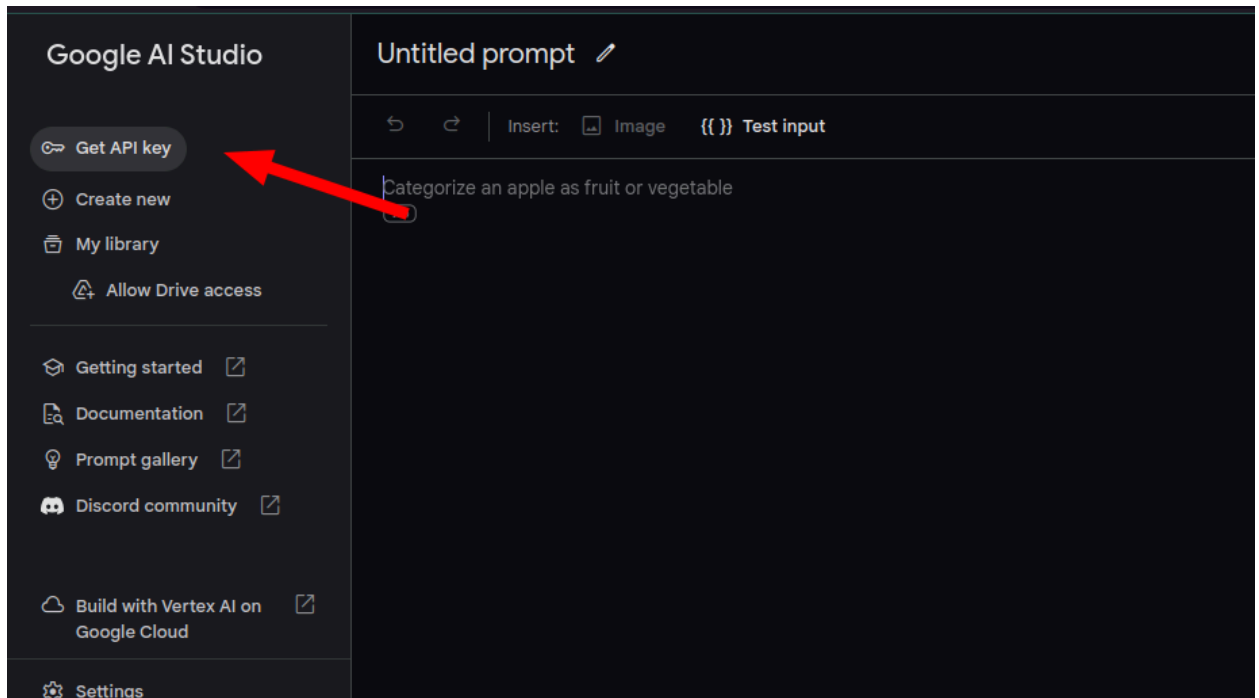

```
getHashtags(someInputText).then((hashtags) => {
  console.log(hashtags) // [...] array of items
});
```

How to get an API key??

- Go to <https://ai.google.dev/>
- Click on get api key

- Click on get Api key

- Then create a new API key and use it in the code above
- Now create something epic 🔥
